Complete Office Deep Cleaning Services

Our 360 ProGuard services include:

Step 1: Certified [HEPA](#) Vacuum(physically remove [microorganism and pollutants](#) down to 0.3 microns or 0.0003mm in size and will not stir up all the dust in the air)

Vacuum all the areas, including the hard to reach areas(can reach up to 4.5m high when starting on floor).

Step 2: Steam Cleaning(using high temperature dry steam to physically kill the microorganisms and pollutants)

Steam all seams. And use different tools to steam clean the surface.

Step 3: UVC Disinfection(use handheld Ultraviolet C (254nm) lamp to kill or inactivate microorganisms by destroying nucleic acids and disrupting their DNA, leaving them unable to perform vital cellular functions) The focused disinfection area is about 30cm*50cm. We move 30cm sideways in every 20s, until we scan the whole room.

UVC Disinfection to the carpet and high touch points.

Step 4: Final checking and protection

All chairs are protected after service.

We will go back to Step 1 if needed.

Brands and products we use for services:
